## Appocore – your future app's heart

5

Ensuring database security for at all levels and efficient encryption

Appocore stands for Application Core.

### $\bigcirc$

Understanding of information security concept and protection from external and internal threats

Compliance with GDPR in the European Union

Compliance with the Personal Data Protection Regulations

### Why Appocore?

- Cost-effective
- Simplified scalability
- Quicker turnaround
- Built by pro's

Appocore is a Platform-as-a-Service (PaaS). We, as a vendor, provide a cloud-based platform for building and running applications

### ૼૢૢૢૢૢૢૢૢૢ

Deep understanding of high-load projects architecture and the importance of scaling

SLL encryption of connections

# Tons of code is already written and business cases solved by us

# Why not use our expertise?

Launch a startup with Appomart is as easy as it gets

Share your great idea with our team

2

Choose between custom integrated module or whitelabel solution

Launch and expand with us

# Launch tailored custom module for your startup and run on our infrastructure

Seed round startups choose modules if they need a place to store and manage content that is served to mobile apps

It's a sort of a custom built sandbox for your project, but run in a secure professional and multi functional environment

With custom module you become a part of our MVP Startups community

You can stay on our infrastructure as long as you need. Switch to white label or even get a dedicated server to fully control the proccess when your are ready to grow

# White label solution is your licenced copy of appocore

Perfect for growing startups on seed, round A stage or even further

White label is great solution when your project needs flexibility and has complicated functionality

Get dedicated domain, custom newsletters, sms, push notifications, branded OAuth and much more from out of the box

You can still choose to run on our infrustracture or move to your servers and get full control

Anyway you get source code and backups

# **Appocore's functionality**

### This Features are ready to empover your project

### **Appocore Passport**

Create and manage user profiles from out of the box. Gmail, Facebook, VK, SMS, e-mail registration, login and recovery. E-mail gateway, last seen.

### InterNationalisation i18n

Reach global market by using our internationalisation plugin as a single point of contact. Language switcher, TTS and LTR support.

### Notification system

Reach your users with ease. Send push, sms and e-mails notifications from Appocore interface.

### **Billing services**

We support any billing gateway including paypal, stripe or raw bank transfers. Invoicing in PDF manualy or on a subscription basis.

### Web-socket integration

Get real-time updates of any content in your app: messages, news, map updates.

### **Consumer features**

Customisable solutions: In-app messenger, courier tracking, shopping cart with linguistic search and catalog, blog, news and stories creator.

### Support service for your guests/ registered users by web/mobile apps and

by e-mail all in one place.

### **Geolocation addons**

Track users current location, fetch addresses and prefill in your app. Search users and content in a specific radius or borders and much more.

### Calculate in background

Optimized calculations are done by "workers" that help your app run smoothly while serving/fetching/parsing date in background on server.

## Focus on your business and let us handle everything else

Cloud dedicated databases

Secure file storage with CDN

Optimized API for web and mobile apps

PWA and WEB applications

Mobile apps development kits

# Access and control from anywhere with your PWA client with Appocore

PWA app is accessable from mobile homescreen

App can be added to MAC or Windows 12:08 • 4G computer desktop × Кабинет НКС Хочу помочь Установить приложение? Add your pwa app from Хочу помоть × lk.xochupomoch.ru modern browsers with 2 clicks Отмена Установить

# **PACKED WITH modern** and Reliable technologies

Backend is based on #1 popular PHP Framework in the world (according to GOOGLE trends), reliable PostgreSQL databases run on dedicated managed servers with point in time recovery and backups in Europe, Asia and Americas.

Web application is built with Vue.js, bootstrap and empowered with native UI.

Deployment and updates delivery is organised with Docker containers with minimum downtime (~15 seconds).

Mobile applications can be build natively with Swift and JAVA or with React native.

Calculations and "math" modules are run on Node.js micro services.

# Technical writing Expertise and ready snippets for common cases

We believe that quality starts with documentation. Our staff had complited a bunch of courses and has a deep understanding in writing quality documentation that comply with IEEE standards. **Banderson** 

Each project is usually supported with:

- Requirements Specification
- Models and properties Specification
- User manuals (both written and video)
- API documentation
- Database scheme
- Interface Specification
- Figma design and prototypes

# Efficient and optimised database created by professionals

### Databases are:

- indexed
- optimised
- including only tables mandatory for your project

			-
man.#			-

standard per		-	-
appleted of	-		-

# Our API has passed many revisions and is ready to empower your app

- API Documentation is held in Postman with TEST, DEV and PROD environments.
- Tests are run in Postman as well
- For debugging we use Telescope and Crashlytics
